

## Help Us Grow the Plants You Need

We would like you to help us so we can help you. Isn't that the way things are supposed to work?

At **Trent Hill Farm & Nursery**, we have been a bit ahead of the 'green' wave being experienced today. Now we would like to go a step beyond...

**Will you take a moment to inform us of the plants you like to use in your landscapes?**

Doing so will be to everyone's advantage;

As an architect/designer you will have a local nursery to recommend to clients and/or to visit and tag plants,

Landscape companies that you recommend can reduce their freight costs and ordering time,

The reduced costs can be passed along to the consumer (which could be our own local green industry stimulus package),

Everyone can be confident of the survivability of the Maryland grown plant stock and the quality of the material we grow,

Energy use and costs, along with carbon emissions, will be reduced.

We will continue to use locally composted and recycled materials for field renovations. We will continue to recycle plastics utilized in cold house protection. We will continue to capture storm water and utilize it as required for watering. We will grow materials using a logical and environmentally sensitive approach to nutrient management.

Help **Trent Hill Farm & Nursery** help you and the environment. Please [email us](#) a list of the plants you use, and we will start the local growing process!
